

Usage of electrical heating foils by Heat Decor with CLASSEN CERAMIN® flooring

Approved materials:

- CLASSEN – Ceramin flooring of 3,8 - 4,5 mm thickness without integrated sound insulation
- Heat - Decor – Heating foils, model „HD-G“
- Heat - Decor – Vapor barrier, thickness 0,2 mm, min. SD-75 m
- Heat - Decor – Sound insulation, thickness 5 mm, 700 kPa (CS)

Attention: Thermal resistance $R < 0,15 \text{ m}^2 \text{ K/W}$ (above heating foil). The vapor barrier serves to seal and protect against moisture from above (e.g. cleaning water, spilled beverages) and below, since the operating voltage of the heating system is 230 V.
